

Treatment Planning the Edentulous and Partially Edentulous Patient for Implant Therapy

LIVE CE WEBCAST

Developing a plan for the treatment to replace some or all teeth in a dental arch requires careful consideration of many factors. These include the needs and desires of the patient, the requirements of implant placement for long-term success, forces of occlusion, and the design characteristics of different types of restorations for partial and full arch restorations. This presentation includes a discussion of the appropriate indications for multiple single-unit restorations, fixed partial dentures, and full arch restorations that are implant supported or implant retained. Improving the retention of overdentures with new attachments will be included.

After completion of the program, participants should be able to:

- List and describe methods of determining patient interests and needs for implant therapy.
- List and describe requirements of implant restorations for long-term success.
- Describe the difference in magnitude and direction of occlusal forces in different parts of the mouth.
- Describe differences in the magnitude of occlusal forces for various combinations of natural teeth and implants as well as different types of restorations.
- Describe the differences between implant-retained and implant-supported restorations.
- Describe the improvements in complete denture retention that may be achieved with the use of new attachments.

Edward R. Schlissel, DDS, MS

Dr. Schlissel received his dental degree from State University of New York (SUNY) at Buffalo, School of Dentistry in Buffalo, New York and his Materials Science degree from SUNY at Stony Brook, College of Engineering and Applied Sciences, in Stony Brook, New York. He is a Fellow of the Academy of General Dentistry and a member of the Academy of Osseointegration. Dr. Schlissel is currently Assistant Clinical Professor of Surgery in the Division of Oral and Maxillofacial Surgery, Department of Surgery at Emory School of Medicine in Atlanta, Georgia and Professor Emeritus of General Dentistry, School of Dental Medicine at SUNY at Stony Brook in New York. Dr. Schlissel currently maintains a private practice in Marietta, Georgia.†

August 24, 2017
