Stefan Fickl, DMD, PhD
Kai Fischer, DMD

Advanced
Periodontology and Implantology – Esthetics and Function
July 10 – 11, 2017

Winterthur (near Zurich), Switzerland
Stefan Fickl, DMD, PhD

2003  Dental degree at University Erlangen, Germany
2004  Doctor Thesis
2004 – 2007 Postgraduate Education in Periodontology and Implant Dentistry at the Institute of Periodontology and Implantology (IPI), Munich, Germany
2007 – 2009 Assistant Professor in the Department of Periodontology and Implant Dentistry (Chair: Dr. Dennis Tarnow) at New York University, New York, United States
since 2009  Associate Professor in the Department of Periodontology, University of Wuerzburg, Germany
2011  Habilitation (Privat-Dozent, PhD-Thesis) and Venia legendi

Dr. Fickl is part of the editorial board of various dental journals, international speaker in the field of Periodontology and Implant Dentistry and author of numerous publications and book chapters.

Stefan Fickl, DMD, PhD has a financial relationship with Zimmer Biomet.
2004 – 2009  Study of Dental Medicine at the Julius-Maximilians-University of Würzburg, Germany
27/11/2009  State examination
2010 – 2012  Dentist and participant in the postgraduate program in Periodontology of the German Society for Periodontology (DGParo e.V.) at the Department of Periodontology, Würzburg
14/01/2011  Promotion (Dr.med.dent.)
2013  Specialist in Periodontics, German Society for Periodontology (DGParo e.V.)

04/2013 – 02/2014  Honorary Research Associate & Clinical Teaching Fellow, UCL Eastman Dental Clinic, Unit of Periodontology, London, UK
02/2014 – 12/2016  Senior Clinical Lecturer, Department for Periodontology, University Witten/Herdecke, Germany Honorary Clinical Lecturer, UCL Eastman Dental Clinic, Unit of Periodontology, London, UK
since 02/2017  Private dental practice, Drs. Schütz/Tawassoli, Würzburg

Dr. Fischer has published several national and international articles in peer-reviewed journals. He is regularly lecturing on topics in the field of periodontology and implant dentistry. His research is focused on gingival biotype assessment, ridge preservation after tooth extraction and soft tissue augmentation with collagen matrices.

Kai Fischer, DMD has a financial relationship with Zimmer Biomet.
Course objectives

This two day intensive course is to provide the clinician with an evidence based concept on the periodontal compromised and aesthetically demanding patient. The first day will focus on current concepts to restore failing teeth in the anterior zone. In particular soft and hard tissue augmentation techniques, which have been transferred from plastic periodontal surgery (connective tissue grafts, repositioning techniques) will be discussed and trained during the hands on session. Immediate and delayed implant procedures including ridge preservation with allografts will be part of the theoretical and practical workshops. Additionally cutting edge technologies, such as individual allograft bone blocks, will be discussed and hands on surgeries performed. The second day will encompass the periodontally involved patient. Here principal strategies will be discussed, again with the focus on soft tissue techniques. The various phases of periodontal therapy including implant therapy in periodontal compromised dentition and their long-term maintenance will be demonstrated on complex clinical cases. Hands-on workshops is designed to acquiring to depth knowledge about the novel methods in surgical periodontal therapy including the use of biomaterials and incision techniques, flap designs and suturing techniques aiming to treat the defects caused by periodontal and peri-implant infections.

Topics

- Flap designs and suturing techniques for reconstructive periodontal surgery
- Allograft bone block
- Implants in periodontal compromised patient
- Treatment planning / case presentations
- Immediate implantation in the aesthetic critical zone
- Soft-tissue management for perio patients
- Augmentation of mucosa around implants with free gingival grafts
- Implantation with simultaneous soft tissue corrections
- Bone augmentation with substitute material
- Ridge preservation techniques
