

Bone Profilers

1 Precision

Provides precise cutting of bone for the perfect amount of bone reduction

Creates an accurate and uniform emergence profile for proper seating of healing abutments and other restorative components

2 Simplicity

One-piece component, eliminates the need for separate guide pins

The latch-lock connection design allows for use of a single Bone Profiler with a contra-angle handpiece or for use manually; eliminates the need for various Bone Profilers

3 Optimal Design

Designed to enhance cutting efficiency, contributing to swift removal of bone

Design of the Bone Profilers as a single-piece unit provides ease of use during surgical site preparation

ZIMMER BIOMET
Your progress. Our promise.®

Bone Profilers are used to assist in bone removal around the coronal aspect of the implant, allowing for proper seating of healing abutments, prosthetic components, impression copings and final restorations. It is especially useful for subcrestal implant placement but can be utilized in select crestally placed implants as needed.
