

CE WEBCAST

Peri-implantitis is an emerging problem that affects between 11% and 47% of implant patients. It is generally accepted that peri-implant mucositis is a precursor to peri-implantitis. The anatomy of the peri-implant tissues largely depends on the position of the implant, the implant system used, and the clinical/prosthetic protocol followed. The design of the definitive implant abutment can be digitally enhanced to respect the biological space and prevent peri-implant breakdown. This program will review current knowledge about the causes of peri-implant disease, prevention strategies to prevent problems before they develop, including the selection of an implant system to help mitigate the risk of peri-implant disease.

After completion of the program, participants should be able to:

- Describe peri-implant mucositis, its causes, and treatment modalities.
- Describe peri-implantitis, risk factors involved, and potential treatment modalities.
- Understand the management protocol for treating early, moderate, and advanced peri-implantitis cases.
- Understand the term “explantation” and under what circumstances this treatment protocol is used.
- Understand and be able to implement a digital workflow utilizing the BellaTek® Encode® Impression System.

Munib Derhalli, DMD, MS, MBA

Dr. Derhalli graduated from Oregon State University and received his doctorate from Oregon Health Sciences University, School of Dentistry. While serving in the military, he completed a Masters in Business Administration and then a three-year Masters of Science residency in Periodontology at the University of Oklahoma Health Sciences Center. Dr. Derhalli has held teaching appointments at the University of Oklahoma Graduate Periodontics Department and at Oregon Health Sciences University Graduate Periodontics Department in the post-doctorate program. Dr. Derhalli is a Diplomate of the American Board of Periodontology and is a member of various dental societies. He maintains a private practice with a focus on periodontal plastic surgery and implant reconstruction in Vancouver, Washington.†

DATE/TIME: On Demand-Viewing

CONTINUING EDUCATION: 1 Credit

FEE: Complimentary*
