

## CE WEBCAST

This program will thoroughly review current knowledge about the causes of peri-implant disease. Emphasis will be placed on recognizing complications related to peri-implant mucositis, peri-implantitis, and cement-induced peri-implantitis, as well as treating ailing and failing implants. Prevention of problems before they develop will be stressed, including the selection of an implant system to help mitigate the risk of peri-implant disease.

After completion of the program, participants should be able to:

- Recognize the signs of peri-implant mucositis, peri-implantitis, and cement-induced peri-implantitis.
- Develop maintenance programs for their practices that are designed to prevent development of peri-implant disease.
- Understand the factors in implant design and use that can minimize the risk of peri-implant disease developing.
- Discuss the options for treating peri-implantitis including resective and regenerative approaches.

### Alan Meltzer, DMD, MScD

Dr. Meltzer received his dental degree from the University of Pennsylvania and his Masters in Periodontics and Oral Medicine from Boston University, School of Graduate Dentistry. He is a Diplomate of the American Board of Periodontology and the International Congress of Oral Implantology. Dr. Meltzer is a Fellow of the Academy of Osseointegration, where he served on the Research and Education Committees. He is a past director of Graduate Periodontology at Temple University Dental School and a past clinical professor in the Department of Post-Graduate Periodontics and Periodontal Prosthetics at the University of Pennsylvania. Dr. Meltzer maintains a private practice in Voorhees, New Jersey.†
