Use a dry erase marker to track the total number of osteotomy preparations that are performed with each drill. It is recommended that reusable drills be replaced after 15 uses. *Single use drills should be disposed of after each procedure.

### Surgical Instruments

Surgical instruments are susceptible to damage for a variety of reasons including prolonged use, rough handling, inadequate cleaning, etc. Care must be taken to avoid compromising the intended performance of the instrument.

*Single use drills must be disposed of after each procedure.* The chart is intended to be used as a reference guide only. Refer to Instructions for Use (IFU) for Biomet 3i Kits and Instruments (P-ZBDINSTRP) available at ifu.biomet3i.com for complete Cleaning and Sterilization instructions.

- Use a dry erase marker to track the total number of osteotomy preparations that are performed with each drill.
- It is recommended that reusable drills be replaced after 15 uses.
- *Single use drills should be disposed of after each procedure.*
KNOW HOW TO IDENTIFY EXCESSIVE WEAR

Before each use, visually inspect all devices and trays/kits for completeness, damage and/or excessive wear (e.g. corrosion or rust build-up on the instrument surface, structural wear or damage, grommet presence or damage partial or complete fracture. If damage or wear is noted that may compromise the function of the instrument or tray, DO NOT USE. Contact your Zimmer Biomet representative for replacement.

Inspection for Wear and Damage

Refer to Instructions for Use (IFU) for Zimmer Instrument Kits, Drills and Tools available at https://labeling.zimmerbiomet.com for complete Cleaning and Sterilization Information.
