Implementation of Intraoral Scanning and a Coded Healing Abutment Impression System

This webinar will explore current digital technologies and their potential for enhancing dental implant treatment. A simplified impression protocol for fabrication of patient-specific implant-supported restorations will be discussed, as well as the benefits of using an intraoral digital scanner for data capture. Principles for designing CAD/CAM abutments and aesthetic restorations will be presented.

After completion of the program, participants should be able to:

- Develop a strategy for using new digital technologies in their practices to achieve more predictable patient outcomes.
- Understand the major aspects of CAD/CAM abutment fabrication, including design principles, clinical procedures, and laboratory procedures.
- Describe how to impress or scan coded healing abutments accurately.
- Explain the benefits of various intraoral scanning systems.
