Trabecular Metal™ Dental Implant
Risk Management With BioBoost™ Effect

Healing Power For Your Smile
Trabecular Metal Dental Implant

Risk Management With BioBoost™ Effect

Traditional dental implants serve as an artificial tooth and have been used for many decades with high rates of success.

The Trabecular Metal Dental Implant leverages the BioBoost Effect to enhance healing in patients with poor quality bone or health conditions that could impair healing.¹⁻⁸ Talk to your doctor today to see if the advanced healing technology of the Trabecular Metal Dental Implant is an option to help you get your smile back.
How May The Trabecular Metal Dental Implant Benefit Me?

Advanced Healing Technology:
Trabecular Metal Dental Implants with the BioBoost Effect may help to enhance your natural healing process compared to traditional dental implants.4,5,8 Patients with risk factors such as diabetes, osteoporosis, prior infection or cancer, and poor bone quality have been treated successfully with the Trabecular Metal Dental Implant in several documented clinical studies.1-7

Peace Of Mind:
Patients with certain medical conditions have a higher risk of dental implant failure. While not a guarantee of success, the Trabecular Metal Dental Implant may offer beneficial conditions for tooth replacement in patients with poor bone and impaired healing.

*NOTE: Individual results may vary and case shown is not a guarantee of success.
While this brochure is designed to address some of the frequently asked questions about Trabecular Metal Dental Implants, your doctor remains the best source for information regarding dental implants and whether this product is right for you. Your doctor will advise you on specific procedural expectations, warnings, risks, contraindications and potential adverse effects associated with a dental implantation procedure, as well as individual post-operative care instructions and answers to any additional questions or concerns you may have.
