CopiOs® Pericardium Membrane

Demonstrated Performance

• Clinically demonstrated performance in guided bone regeneration procedures, where ease of manipulation and adaptability to surface contours is essential

Long-Lasting

• Shown to provide a stable, long-lasting barrier during healing and integration of Puros® Allografts and staged or immediately placed implants

Retains Natural Tissue Structure

• Supports an aesthetic soft tissue response through facilitation of cell attachment and proliferation and remodeling into vascularized connective tissue

• Retains the structure and composition of natural tissue due to the proprietary Tutoplast process, leading to optimal performance and handling
For over 40 years, Tutoplast processed tissues have been safely used in more than 5 million procedures.¹

The proprietary Tutoplast process assures the highest standard of tissue safety and quality with minimal risk of disease transmission.² The process preserves the valuable collagen matrix and tissue integrity while inactivating pathogens and gently removing unwanted materials, such as cells, antigens and viruses.³ The result is safe, biocompatible tissue.

### Ordering Information
