PROGRAM DESCRIPTION:
While adequate bone is the ultimate requirement for implant and tooth success, adequate gingival tissues are also essential for ideal aesthetics and health. This presentation will focus on the parameters which must be considered during the diagnostic phase and treatment phase to assure biologic and aesthetic success around teeth and implants. The use of soft-tissue allograft to augment soft tissue around teeth and implants will be discussed. Treatment options will be illustrated and discussed through a variety of clinical case examples.

PROGRAM OBJECTIVES:
At the completion of the program, participants should be able to:
• Review parameters for gingival aesthetics around teeth and dental implants.
• Properly diagnose and treatment plan for aesthetic success around teeth and implants.
• Understand a variety of techniques that are available for soft-tissue regeneration.
• Choose the appropriate therapy for different surgical situations.

Michael Sonick, DMD
Dr. Michael Sonick is an internationally-known, highly-regarded authority in the field of dental implantology and periodontology. He completed his undergraduate degree at Colgate University. He received his DMD at UCONN School of Medicine and his certificate in periodontology at Emory University. He received his implant training at Harvard University as well as the Branemark Clinic in Gothenburg, Sweden. He is the co-editor of the multi-language textbook, Implant Site Development and serves on the editorial boards of numerous journals. A full time practicing periodontist in Fairfield, Connecticut, he is also a frequent guest lecturer in the international program at NYU School of Dentistry and the UCONN School of Dental Medicine.
