Delivering aesthetic immediate and long-term implant restorations on a consistently predictable basis can be challenging. As single and two-stage protocols have given way to immediate implant placement and immediate restoration, biomechanical requirements and aesthetic demands have evolved. This webinar will review changes in treatment planning, implant site preparation, and immediate restoration of implants in the aesthetic zone.

After completion of the program, participants should be able to:

- Implement new techniques for selecting cases and using CT scans in treatment planning.
- Understand the proper placement of implants in extraction sockets and the rationale for grafting the gap between the implant and buccal socket wall.
- Describe how to design and fabricate provisional restorations.
- Understand the biomechanical and aesthetic considerations for achieving high primary stability.

Harold Baumgarten, DMD
Dr. Baumgarten received his dental degree, as well as Certificates in Periodontal Prosthetics and Periodontics, from the University of Pennsylvania, School of Dental Medicine. Dr. Baumgarten is on the Editorial Board of the Journal of Implant and Reconstructive Dentistry® and the Compendium of Continuing Education in Dentistry. He is a Clinical Professor with the Department of Periodontics at the University of Pennsylvania. Dr. Baumgarten maintains a private practice in Philadelphia, Pennsylvania.
