Understanding the Workflow from Impression to Definitive Restoration in a Fully Digital Implant World

ON-DEMAND WEBCAST

PROGRAM DESCRIPTION:
The introduction of intraoral digital scanners for use with coded healing abutments has eliminated the need for traditional impressions. Instead, the scanner data can be used to create a three-dimensional digital model of a coded healing abutment in the patient’s mouth. Abutment design can be greatly enhanced, and the interval between impression making and delivery of the computer-milled titanium definitive abutment/restoration can be significantly compressed. This program will review the steps involved in using intraoral scanning technology to create definitive, CAD/CAM patient-specific implant-supported restorations. Benefits and limitations of scanners currently available will be discussed, along with design principles used in CAD/CAM abutment design.

PROGRAM OBJECTIVES:
At the completion of the program, participants should be able to:
- Describe the critical differences between analog-based and fully digital-based implant dentistry.
- Describe the procedures involved in taking a digital implant impression with the BellaTek® Encode® Impression System.
- Have a working knowledge of the workflows necessary to create an implant-supported restoration from a digital impression and the associated time savings.
- Provide treatment based upon the patient’s needs while reducing chairtime and achieving aesthetic outcomes.
- List the benefits of utilizing a fully digital workflow to create implant-supported restorations.

David H. Moed, DDS
Dr. Moed received his Doctorate of Dental Surgery from the State University of New York at Buffalo School of Dental Medicine and attained his Prosthodontic Specialty Certificate from New York University College of Dentistry in New York, New York. Dr. Moed is the past President of the Scarsdale Dental Society, a member of the American Dental Association, the Academy of Osseointegration, the Scarsdale Dental Society, New York State Dental Association, and the 9th District Dental Society. He is currently an on-call professor in the Prosthodontic Department at New York University College of Dentistry. Dr. Moed maintains a private practice in White Plains, New York.
