

Clinical Guidelines: Implant Therapy for the Edentulous Patient

LIVE CE WEBCAST

PROGRAM DESCRIPTION:

Patients with debilitated dentition or who are edentulous, often seek rehabilitation with implant therapy to quickly regain their confidence and quality of life. Immediate full-arch restoration can be an excellent solution for meeting patient demands and expectations. This program will provide an overview of this treatment modality and demonstrate a step-by-step, practical approach to delivering provisional full-arch prostheses on the day of implant placement, and later creating an aesthetic, functional definitive prosthesis.

PROGRAM OBJECTIVES:

At the completion of the program, participants should be able to:

- Understand the scientific basis for immediate occlusal loading of edentulous jaws.
- Determine which patients are the best candidates for immediate full-arch therapy.
- Develop a plan for fabricating an immediate full-arch provisional restoration with the aid of the Revitalize® Guidelines.
- Understand the components required and procedures for fabrication of the definitive prosthesis.

Geoffrey Cunningham, DDS, MS, FACP

Dr. Cunningham received his DDS and his MS in Prosthodontics from West Virginia University in Morgantown, West Virginia. He is a diplomate with the American Board of Prosthodontics and is the current owner and president of a prosthodontics practice in Durham, North Carolina. His practice focuses on reconstructive dentistry where he typically treats patients requiring complex multidisciplinary rehabilitation involving implant, fixed, and removable prosthodontics. Dr. Cunningham lectures nationally and is an adjunct professor at the University of North Carolina at Chapel Hill.
