

The Technology of Grafting Materials

How to Select the Best Regenerative Materials to Meet the Clinical Need

15th November 2018 (Thursday)

PROGRAM DESCRIPTION:

This program will review the chemical and physical properties of various regenerative materials to assist clinicians in selecting the best materials to meet the clinical need of the patient. A comprehensive review of the Zimmer Biomet Dental Regenerative Portfolio will be presented to provide a working knowledge in the selection of the most optimal bone graft material or membrane for the defect, including how processing methods may affect treatment outcomes. Vertical bone regeneration as well as avoiding pitfalls in soft tissue management will also be discussed. **Terri Oto** will also speak on dermis grafting techniques. This program includes a hands on for bone grafting and membrane placement in post extraction socket.

Program Fee

Complimentary*

Program valued at \$100

PROGRAM OBJECTIVES:

At the completion of the program, participants should be able to:

- Describe various allografts, xenografts, and synthetic bone graft materials.
- Select the most optimal graft material and membranes to meet the patient need.
- Have a working knowledge of the impact of processing methods on the matrix/consistency of regenerative materials.
- Understand the placement and handling characteristics of various grafting materials.

MS. Terri Oto

Ms. Terri Oto is a Certified Tissue Bank Specialist with the American Association of Tissue Banks. She is an accomplished professional with over 20 years of experience in medical devices and biologic implants in many specialties: Periodontology, Oral & Maxillofacial Surgery, General Surgery, Gynecology, Ophthalmology, Orthopaedics, otolaryngology, Plastic & Reconstructive Surgery and Urology. She is an experienced trainer and has instructional skills in topics such as tissue banking methods, biologics, implants, wound healing and surgical techniques.
