PROGRAM DESCRIPTION:
The surgical success of dental implants has become quite predictable. Strategies and techniques exist today that has changed older paradigms of implant therapy, and allow implant treatment to be accelerated. These include the immediate placement of dental implants at the time of extraction, as well as the immediate provisional restoration of implants at the time of placement. This presentation will focus on the parameters which must be considered during the diagnostic phase to assure successful and precise implant placement at these different phases of treatment. Included will be a clinical and research-based review of the indications and contraindications for immediate implant placement, and immediate loading of dental implants placed into “healed” extraction sites.

PROGRAM OBJECTIVES:
At the completion of the program, participants should be able to:

• Understand the indications and contraindications for immediate versus delayed implant placement.
• Be knowledgeable as to the steps in pre-surgical planning.
• Understand the sequencing of treatment for full arch therapy.
• Know when to perform bone and/or gingival augmentation.

Michael Sonick, DDS
Dr. Sonick is a graduate of Colgate University, the University of Connecticut School of Dental Medicine, and Emory University School of Dentistry in Periodontics. He currently is a Guest Lecturer at New York University School of Dentistry in their international dental program and a former Clinical Assistant Professor in the Department of Surgery at Yale University School of Medicine. Dr. Sonick is Founder and Director of the Fairfield County Dental Club. He lectures, both domestically and internationally, and maintains a private practice, devoted to Periodontics, in Fairfield, CT.
