

# Treatment Planning and the Decision Making Process for the Terminal Dentition

LIVE CE WEBCAST

## PROGRAM DESCRIPTION:

The terminal dentition presents significant diagnostic and treatment planning challenges. Loss of teeth caused by severe periodontal disease, as well as caries, often results in disfigurement, infection and loss of function. Severe bone loss may ensue. The multiplicity of treatment options available to treat the failing dentition will be elucidated with a clear algorithm which allows the doctor to guide the patient decision making process. With the predictability of implant therapy, patients previously without hope, can be restored to health and aesthetics.

**Program Fee**  
Complimentary

**CE Credit**  
1

## PROGRAM OBJECTIVES:

At the completion of the program, participants should be able to:

- Learn the Treatment Planning Checklist – Examination, Diagnosis, Treatment Plans, and Treatment.
- Understand the costs, risks, and benefits to the multiplicity of patient treatment options.
- Realize that bone is the most important requirement for implant success.
- Understand the various forms of treatment for full mouth implant restorations including removable and fixed options.

### Michael Sonick, DDS

Dr. Sonick is a graduate of Colgate University, the University of Connecticut School of Dental Medicine, and Emory University School of Dentistry in Periodontics. He currently is a Guest Lecturer at New York University School of Dentistry in their international dental program and a former Clinical Assistant Professor in the Department of Surgery at Yale University School of Medicine. Dr. Sonick is Founder and Director of the Fairfield County Dental Club. He lectures, both domestically and internationally, and maintains a private practice, devoted to Periodontics, in Fairfield, CT.
