

High Torque Indicating Ratchet Wrench

Dynamic Torque Feedback

1 Accuracy

- Indicates forward and reverse insertion torque levels for implant insertion from 50 to 90 Ncm.

2 Simplicity

- Disassembles and reassembles easily for cleaning, sterilization and use. No lubrication or calibration needed.

3 Versatility

- Compatible with placement of Trabecular Metal™, TSV®, Eztetic®, and Tapered SwissPlus® Implant.

Zimmer Biomet now offers a High Torque Ratchet Wrench, allowing placement of dental implants with dynamic torque feedback.

ZTIRW

ZTIRW is compatible with placement of Trabecular Metal, TSV, Eztetic, and Tapered SwissPlus Implants, and all three of the tool components are silver in color.

NOTE: If high insertion torque during implant placement is anticipated, dense bone preparation and tapping are required to reduce insertion torque to 90 Ncm or below when using ZTIRW for torque indication. Do not exceed 90 Ncm when pulling on the torque-indicating arm. Utilize the ZTIRW body, without pulling on torque-indicating arm, as a traditional ratchet wrench, for torques up to 110 Ncm.

Easy disassembly for cleaning and sterilization

Forward and reverse torque indication from 50 to 90 Ncm

Ordering Information

Item No.	Description
ZTIRW	High Torque Indicating Ratchet Wrench for Trabecular Metal, TSV, Eztetic, and Tapered SwissPlus Implants (Compatible implant drivers include CHR2.1, CHRL2.1, RH2.5, RHL2.5, HX3.0-S, HXL3.0-S, OT3.0-S, OTL3.0-S and Implant Fixture Mounts)
