

Extraction and Socket Grafting Procedures Utilizing the BABE Graft Technique

COMPLIMENTARY LIVE CE WEBCAST

PROGRAM DESCRIPTION:

In this program, extraction and socket grafting procedures utilizing the BABE Graft technique will be performed demonstrating the use of autologous growth factors and platelet rich fibrin to enhance the grafting procedure. Participants will view clinical procedures performed by a highly-skilled clinician who will explain and showcase advanced surgical and restorative techniques, helping participants to implement them into their practices. Given the cutting-edge nature of the procedures and services presented in this program, participants will be given the ability to watch the clinical procedures, then participate in an interactive question and answer session with the speaker about the techniques performed.

PROGRAM OBJECTIVES:

At the completion of the program, participants should be able to:

- Understand atraumatic extraction techniques.
- Understand socket grafting principles, techniques, and materials to enhance grafting procedures.
- Understand the rationale and use of autologous growth factors and platelet rich fibrin.
- Understand how to simplify grafting procedures keeping with minimally invasive procedures.

Jason Kim, DDS, FAAID, DABO/ID

Dr. Jason Kim completed his Periodontal training and received a Master's certificate from Rutgers School of Dental Medicine, Dept. of Periodontics. He is now Clinical Assistant Professor in the Dept. of Periodontics at Rutgers School of Dental Medicine. He is also Clinical Assistant Professor at NYU College of Dentistry, Implantology Program.
