1. Documented Successful Bone Regeneration

- Documented graft and implant success rates\(^1,3\) make it a viable alternative to autogenous block grafting\(^4,5\).
- Multicenter data reported 91% Puros Allograft Block and 99% Tapered Screw-Vent\(^{TM}\) Implant survival at three years\(^1\).
- Cortico-Cancellous structure retains the remodeling capabilities of cancellous bone with the strength advantages of cortical bone needed for dimensional ridge augmentation\(^1,3\).

2. Time-Saving

- Saves time, helps to reduce pain, and can shorten the patient’s rehabilitation period by eliminating the need to harvest an autogenous graft.

3. Tutoplast\(^{®}\) Tissue Sterilization Process

- Sterilized and preserved using the proprietary Tutoplast\(^{®}\) Process, Puros Allograft Block offers a high-quality option for bone regeneration.
- Retains osteoconductive properties due to the preservation of the natural bone matrix collagen and mineral composition, trabecular pattern, original porosity\(^1,2,6\).
- Five-year shelf life and room temperature storage.
A Clinically Proven Documented Solution For Restoring Volume To Severely Resorbed Ridges.\textsuperscript{1,3}

Clinical Advantages Of Puros Allograft Blocks

\begin{itemize}
  \item Outcomes\textsuperscript{1,3} have been comparable to those generally reported for autogenous block grafting, but without the need for a second surgery to harvest native bone.\textsuperscript{4,6}
  \item Clinical reports have documented the ability to stabilize implants 5-6 months after grafting.\textsuperscript{1,3}
\end{itemize}

For over 40 years, a variety of Tutoplast processed tissues have been distributed in more than five million procedures.
