PROGRAM DESCRIPTION:
In this program, guided bone regeneration of the maxillae will be performed demonstrating bilateral lateral window maxillary sinus lifts and lateral ridge augmentation techniques, in preparation for full-arch implant-supported rehabilitation. Participants will view clinical procedures performed by a highly-skilled clinician(s) who will explain and showcase advanced surgical and restorative techniques, helping participants to implement them into their practices. Given the cutting-edge nature of the procedures and services presented in this program, participants will be given the ability to watch the clinical procedures, then participate in an interactive question and answer session with the speaker about the techniques performed.

PROGRAM OBJECTIVES:
At the completion of the program, participants should be able to:
• Evaluate patients for immediate vs. delayed maxillary full arch dental implant rehabilitation.
• Review maxillary sinus classifications.
• Describe one method for maxillary sinus augmentation.
• Have a working knowledge of performing lateral ridge augmentation.

Michael J. Hartman, DMD, MD
Dr. Hartman received a dental degree at Temple University School of Dentistry in 2002. He then completed a six-year dual degree in oral and maxillofacial surgery residency at the University of Maryland Medical Center, earning an MD in 2005 and completing his residency in 2008. His education and training at UMMC involved dental extractions, maxillofacial oncology, major cranio-maxillofacial trauma at the R. Adams Cowley Shock Trauma Center, microvascular reconstructive surgery, orthognathic surgery, and third molar extractions. Dr. Hartman returned to Central Pennsylvania in 2008 where he worked in private practice in Camp Hill for seven years, then opened his solo practice in Mechanicsburg with an emphasis on dental implant therapy and treatment of oral lesions.
