Clinical Rationale for Integrating Digital Workflows Into Everyday Practice

PROGRAM DESCRIPTION:

The evolution of digital dentistry has provided dental professions with a new standard in delivering restorations with both aesthetic and functional outcomes. The combination of CAD/CAM technology and intraoral scanners allows restorative clinicians in collaboration with the dental laboratory to design and fabricate patient-specific restorations for optimal outcomes. This program will review today's digital technologies; provide an overview of the benefits and limitations of intraoral scanners; and the design principles used in abutment design and restoration fabrication to optimize aesthetics.

PROGRAM OBJECTIVES:

At the completion of the program, participants should be able to:

- Develop a strategy to utilize new technologies to provide treatment that meets patients' needs while reducing chair-time.
- Integrate digital workflows into the dental practice.
- Use advanced technologies for developing aesthetic restorations supported by dental implants.
- Comprehend the benefits and limitations of intraoral scanners.
- Understand the design principles used in CAD/CAM abutment design.
