

Utilizing Coded Healing Abutments for Fabrication of Patient Specific Implant Abutments: Part I

LIVE CE WEBCAST

This webcast will focus on new techniques and digital technologies for the fabrication of implant-supported restorations, including data capture with the use of a coded healing abutment for fabrication of CAD/CAM abutments. Benefits and limitations of intraoral scanners currently available will be discussed, along with advanced design principles used in CAD/CAM abutment design. This program is indicated for all members of the implant team and will emphasize the requisite communication desired amongst the surgeon, restorative dentist, and laboratory technician to ensure optimal patient outcomes.

After completion of the program, participants should be able to:

- Understand the new digital technologies available for fabricating implant abutments and restorations.
- Describe advanced techniques for custom abutment design.
- Have a working knowledge of capturing traditional impressions, as well as, the benefits and limitations of intraoral scanning (IOS) with the BellaTek® Encode® Impression System.
- Communicate effectively with the dental implant team to ensure optimal patient outcomes.

Tony Prestipino, CDT

Mr. Prestipino completed the Dental Technology program at Northern Virginia Community College, and received additional specialized training from the Pankey and Dawson Institutes. He is a Certified Dental Technician by the National Board for Certification, and a member of the National Association for Dental Laboratories (NADL), the Academy of Osseointegration and a Proctor for the National Board for Certification. He provides student and staff support at the University of Maryland. Mr. Prestipino is the President of Artifex Dental Laboratory located in Washington, DC.†
